## 2. The Services

#### 2.1 Introduction

This Service Specification is a part of the Master Services Agreement (MSA) between the Purchaser and the Supplier and stipulates the Services that the Supplier shall deliver to the Purchaser within the Service Object.

## 2.2 Relation to other Service Objects

The Supplier shall deliver Intelligent Automation as part of an overall IT landscape delivering IT services and business value to the different business areas. To ensure a good business outcome enabled through an end to end view of information solutions all Service Objects need to collaborate with all other Service objects independent of what the Supplier is delivering what service. All Supplier's in the Purchaser's Supplier eco systems is expected to collaborate with all other Supplier's to ensure a good outcome.

Intelligent Automation services is a cross functional sourcing object; hence its role is to support and provide high quality services and required functionality to end users and other Service Objects.

## 3. Requirements

## 3.1 Services in scope

The Supplier shall conduct all necessary work to provide automation within the frames of Intelligent Automation services in accordance with, but not restricted to, the definitions below. A world class automation delivery is expected based on the Supplier best practices.

The Intelligent Automation Service Object includes the following services:

- Blue Prism Monitor & Maintenance
- Blue Prism Platform Management
- Blue Prism Quality Assurance
- Blue Prism Development
- Microsoft Power Platform

## 3.2 Service Object context, vision and strategies

#### 3.2.1 General

Antartica Bars is a human-centric company, and our open-minded culture unites us and is Purchaser's competitive edge. Purchaser believe in doing things together and gather around missions to achieve great results. The company culture improves the engagement, development and performance, and therefore also the business success and the attractiveness as an employer.

The contribution to the digital transformation is to enable Purchaser's end users to become more efficient in their daily work, regardless of location or time. This will be done by delivering the needed services, just in time, and with first class quality and end-to-end support.

The services will be deployed so automation partners are able to collaborate with us and get the automation capacity needed. The Supplier shall lead the journey consistently delivering a collaborative approach. It

5 (19)

is understood failures occur but the primary focus is learning from them, initiating and delivering continual improvement activities.

The Supplier shall provide a Intelligent Automation service that is highly flexible, scalable and subject to high frequent change over the next coming years. With a fast pacing surrounding world, the services shall be quickly adoptable to new demands and consumption patterns to support the Purchaser's demanding 2025 targets.

Object Specification Intelligent Automation

This will require a transformation from today's individual resource outlook on the services and put focus into being the enabler for Purchaser's business ventures and put more focus on supporting the Purchaser's digital transformation, digital products and setting us up for rapid change and opportunity within our industry. The Purchaser need to be an enabler to drive our overall ambition and aim to improve our user experience every day.

A key component in achieving this transformation is to ensure that the right competence is available to address new challenges and innovation in the space of Intelligent Automation. The Purchaser needs access to the Supplier's global knowledge and experience and require good mechanisms to provide the competence and skills needed to stay current with global trends. It will also require new ways of working and new delivery models to ensure agility and speed in deliveries and development.

The way forward will require delivery of high-quality services with enough capacity, correct timing, speed, monitoring and SLA fulfilment. It will also require proactive improvements to deliver state of the art technology. Purchaser expect management of the services according to industry best practices.

### 3.2.2 Intelligent Automation

The Intelligent Automation Product Area is a key enabler to reach our company goal. It works in close collaboration with the respective departments / functions to truly deliver a digital transformation. The Intelligent Automation in its entire operating model shall act as one team for the greatest benefit of the Intelligent Automation user community.

The Intelligent Automation service object includes capabilities, shared and unique, such as, but not limited to:

- Blue Prism Monitor & Maintenance
- Blue Prism Platform Management
- Blue Prism Quality Assurance
- Blue Prism Development
- Microsoft Power Platform

With the Purchaser's end user community:

- Employees of the Purchaser at all business units (Citizen Developers)
- Departments with an Intelligent Automation Strategy
- National Sales Companies (NSC) with an Intelligent Automation Strategy

The overall goal for Intelligent Automation is to provide a stable, efficient and constantly improving service. Acting as the interface between each of the Purchaser end-user community and the services they consume this delivery has a major impact on the overall experience. It's achieved by:

- · Building and deserve trust
- Deliver with a user centric approach and demand-driven developments
- Align and collaborate with Stakeholders to identify needs and requirements
- Proactively work with Knowledge base improvements and Incident analysis
- Continuously develop to meet the requirements of new technologies
- · Continuously developing the service
- Keep a strong focus on shift left and knowledge sharing both within the team and to other support functions outside the Supplier's delivery
- Supporting the goals of the entire Purchaser's delivery / organization

| Automation                      |                 |       | 7 (19)          |

The service shall have a global view and be delivered with understanding and close collaboration with the Purchaser's core business units and existing hub setup. The last year's aggressive growth and expansion into new regions and business opportunities has shown that continuous dialogue with the business units is crucial to being able to develop according to needs. It has also made it clear that extra focus is required within three main areas defined as our different Service offerings.

These service offerings are required to have the same core building stones e.g. tools and processes but with another set of specific capabilities unique for that service offering. It is all specified in the upcoming sections.

The following service offering is included in the Intelligent Automation operating model today:

- Blue Prism Monitor & Maintenance
- Blue Prism Platform Management
- Blue Prism Quality Assurance
- Blue Prism Development
- Microsoft Power Platform

All team members should contain broad knowledge in all areas with a certain area of deeper expertise and responsibility to drive improvement for the Intelligent Automation team. They shall collaborate, share knowledge and ideas for the greater good of the complete support delivery. Also, this full scope can be used to create career paths and efficiency into the delivery for better employee retention.

**Blue Prism Monitor & Maintenance** is part of the operations organization and is the hands and feet working with Blue Prism automation incidents that require an action to complete the scheduled activity. This team is the first point of contact for our stakeholders and must be knowledgeable for deeper troubleshooting when needed to ensure resolution SLAs aren't breached.

- Proactively prevent incidents and SLA breaches through good routines and automation.
- Analyze, conduct RCA to resolve incidents before SLA is breached
- Assist with initial Problem and Problem Candidate analysis

**Blue Prism Platform management** will ensure that the Blue Prism platform is meeting the users expectation and our automations are stable and working. Includes upgrade of servers, Blue Prism platform releases, VMs and databases, installation of software, proactive monitoring of RPA shared NAS storage

Erfan Makhsos - Intelligent

and troubleshooting of technical issues. The activities can be monthly as software updates or ad-hoc as a release of new or updated line of business application.

**The Blue Prism Monitor & Maintenance** together with Platform Management shall assist with keeping the Intelligent Automation environment in a compliant, up to date and secured state based on the releases and reports from Blue Prism. The M&M team is responsible to ensure none of our BOT SLAs are breached.

**Blue Prism Quality Assurance & review** is a service offering mainly focused towards our Citizen Developers and departments with own Intelligent Automation Product teams. Each automation needs to be quality reviewed and approved by this service before go-live can be scheduled.

**Blue Prism Development** is an extra capacity engine for key development assignments towards our Intelligent Automation customers or specific assignments at department driven Intelligent Automation Product teams. All the BOTs delivered should be defect-free and be designed with utmost quality as per our best practice and ROM.

**The Microsoft Power Platform** Service Offerings consists of working as users of the Power Platform to drive transformation and more value out of Blue Prism automations. By having Power Automate, Virtual Agents, Apps and Bl as tools together with Blue Prism, we can build better end-2-end solutions for the purchaser's organization.

Collaboration is a key part of the Antartica Bars culture. It's therefore a must to work closely with other Power Platform teams in the company and aim to integrate the Microsoft Power Platform with our Blue Prism platform. Collaboration and building on each other's strengths is a key factor for success, not competition.

It's also expected to work closely with the Power Platform governance team in Antartica Bars to drive further implementation of new Power tools and functionality released by Microsoft, mainly within Power Automate Desktop and Power Virtual Agent.

**Intelligent Automation New Technology Innovation** is a general mindset that flows through the entire product area, always looking out to find new solutions and innovations that will bring value to our business. Every program increment ends with a 2 week innovation sprint for the whole product area.

The service is delivered globally on several of the Purchaser's sites (Stockholm, Gothenburg, Madrid, Shanghai, Bangalore) with the goal of scaling in Bangalore as the main objective. The mission of Intelligent Automation Service Offering is to collaborate and contribute to the productivity of the Intelligent Automation global team and Purchaser user base by providing a high quality and professional knowledge in the right time.

#### 3.2.2.2 Purpose, Vision and Mission

#### Purpose:

Enabling automation for all employees and consultants at Antartica Bars, thus enabling the speed of the Purchaser's digital transformation journey and free up time of repetitive and rule based activities.

#### Vision

Intelligent Automation act as one global entity, operating with an automation mindset and deliver time back to our teams and colleagues with the use of Intelligent Automation technologies.

#### Mission

The Intelligent Automation mission is to always serve in the best interest of its users and departments with an Intelligent Automation strategy. It will do so by always seeking improvement of process flows with automation, including Intelligent Automation internal services such as self-service communication, selfhealing automations, automatic monitor solutions and feedback loops between Intelligent Automation team and the users as well as to constantly taking the next step to automation/remove repetitive/non-value-

adding tasks. Thus, improving the overall user experience and time spent on actual value adding responsibilities.

#### 3.2.2.3 Digital Transformation with Automation

Intelligent Automation together with our partner shall transform to become an enabler of the Purchaser's digital transformation journey with the use of our Intelligent Automation tools by constantly taking an active part to encourage and drive Intelligent Automation collaboration between stakeholders, remove repetitive tasks and develop according to new business demands.

By always looking from the business view and with focus on our different business units it shall suggest and act upon identified automation initiatives to drive maximum business value for the Purchaser. With clear and ambitious targets for the upcoming years, Intelligent Automation is one of the key areas for enabling the digital transformation journey.

The Supplier shall consider how the broad spectra of service objects, all can be met with the same professional and solution-based experience. It is expected the Supplier to take an active role in changing the behaviour of Intelligent Automation users to increase automation adoption.

Automation and self-healing within monitoring which puts demand on the initial requirements on the monitoring service to develop and transform into new needs and capabilities. A journey where the Supplier of Intelligent Automation will take an active part.

## 3.3 Service requirements

#### 3.3.1 Blue Prism Monitor & Maintenance

The service requirements described below are applicable for the Blue Prism Monitor & Maintenance support services.

| ID | Requirement category | Requirement description |
|----|----------------------|-------------------------|
|    |                      |                         |

## Object Specification Intelligent Automation

| BP<br>M&M1 | Competence    | The supplier shall provide the purchaser with only Blue Prism certified personnel (AD01 minimum), screened and approved by purchaser.  |
|------------|---------------|--|
| BP<br>M&M2 | Operations    | The supplier shall support Intelligent Automation developers and Citizen Developers to execute on daily operational support in production. Tasks such as creating and importing releases, creating and updating schedules, credentials, environmental variables etc. |
| BP<br>M&M3 | Operations    | The supplier shall monitor Blue Prism production environment to ensure all automations work as expected, taking appropriate actions to meet the SLA for every automation running in Blue Prism.  |
| BP<br>M&M4 | SLAs          | The supplier must track response and resolution SLAs for each automation in Blue Prism. SLA breaches must be reported to the purchaser as KPI, with a decreasing trend of breaches over time after implementation of the supplier's services.                        |
| BP<br>M&M5 | Communication | The supplier shall communicate issues and problems that causes SLA breaches in an way that is understandable for that specific business stakeholders, regardless of the stakeholders technical depth.  |
| BP<br>M&M6 | Operations    | The supplier shall perform a proper de-bugging and root-cause analysis of problems that occur in production and has the responsibility of driving the right solutions to production to prevent the same issue from happening again.                                  |
| BP<br>M&M7 | Competence    | The supplier shall drive improvements in Blue Prism processes and objects in collaboration with Intelligent Automation and Citizen developers, creating a feedback loop of learnings from production back to configuration.  |

| Type of document Security of S |       | ,    |   |  |         | Name of document Service         |
|--|-------|------|---|--|---------|----------------------------------|
| Specification  |       |      |   |  |         |                                  |
| Issuer   |       |      |   |  | Page    | –<br>Erfan Makhsos – Intelligent |
| Automation   |       |      |   |  | 11 (19) | _                                |
| BP<br>M&M8   | Compe | ence | The supplier must have a proactive approach to avoiding issues in Production through constant collaboration with Quality Assurance team to prohibit known problems from hitting production. |  |         |                                  |

| BP<br>M&M9  | Ownership                 | The supplier must own and maintain the quality of the Blue Prism to processes running to ensure SLAs are not breached; credentials, schedules, VMs, environmental variables, etc.  |
|-------------|---------------------------|--|
| BP<br>M&M10 | Ownership                 | The supplier must own and maintain the quality of the Operations Handbook for each automated process, governing credentials, schedules, VMs, routines, known issues etc. for every automation.   |
| BP<br>M&M11 | Ownership                 | The supplier is responsible for maintaining the Disaster Recovery Plan (DRP) for Blue Prism and all related infrastructures.   |
| BP<br>M&M12 | Availability & continuity | Supplier shall perform yearly Disaster Recovery (DR) tests.  The scope for each yearly test shall be planned and agreed with the Purchaser. All Blue Prism services shall be covered by a DR test within a time frame in line with Purchaser's policies.  The DR test shall be documented, describing the test, the outcome and (if applicable) corrective actions to be implemented (including timing) due to findings in the DR test.  The DR test report shall be distributed to the Purchaser. |
| BP<br>M&M13 | Continuous<br>improvement | The supplier shall contribute to and drive continuous improvement initiatives in Robotic Operating Model (ROM) and the purchaser's Ways of Working, infusing it with best practices from the supplier organization.  |
| BP<br>M&M14 | Ownership                 | The supplier must present monthly decks to showcase: BOTs health report-card and performance over time, Expection & Termination RCAs, SLA Reports and Breaches.  |
| BP<br>M&M15 | Operations                | The supplier must timely connect with SMEs/Business Owner/POs to take feedback on performance of Critical and High-revenue Bots. Also includes identifying updates and improvements in existing BOTs.  |

|   |                                     |     |                 | Name of document Service         |

## 3.3.2 Blue Prism Platform Management

The service requirements described below are applicable for the Blue Prism platform management support service:

| ID        | Requirement category      | Requirement description   |  |  |  |
|-----------|---------------------------|---|--|--|--|
| BP<br>PM1 | BP Infra-<br>Competence   | The supplier shall provide the purchaser with Blue Prism Technical Architect (ATA02/AIE02) certified personnel, deeply knowledgeable on the Blue Prism Core Platform and it's extensions.  Will be screened and approved by purchaser.  |  |  |  |
| BP PM2    | Azure Cloud<br>Competence | The supplier shall provide the purchaser with an Azure Cloud Specialist/architect, deeply knowledgeable and capable of running self-managed RPA subscriptions in Azure, including app servers, DBs, VMs, AI components and more.  Will be screened and approved by purchaser.   |  |  |  |
| BP<br>PM3 | Operations                | The supplier shall support Intelligent Automation Developers, Citizen Developers and Controllers to execute on daily operational support in production. Tasks such as error searching VMs, databases, APIs or other technical platform related issues to maintain process SLAs. |  |  |  |
| BP<br>PM4 | Technology                | The supplier shall create and maintain the technology roadmap for the Intelligent Automation platform each year, keeping our Blue Prism Core and all additional Blue Prism products up to date.   |  |  |  |
| BP<br>PM5 | Technology                | The supplier is responsible for maintaining and upgrading servers, VMs and databases, installation and testing of new software to meet our current and future demand.   |  |  |  |
| BP<br>PM6 | Technology                | The supplier shall drive improvements in the Blue Prism platform and automation infrastructure to meet the current and future demand.   |  |  |  |
| BP<br>PM7 | Competence                | The supplier must have a proactive approach to avoiding issues in Production through constant collaboration with Intelligent Automation team and its' partners.   |  |  |  |
| BP<br>PM8 | Ownership                 | The supplier must own and maintain the quality of the Blue Prism infrastructure, ensuring no SLAs are breached due to technical issues or down-time.  |  |  |  |

## 5. KPIs

## 5.1 Operations & Maintenance KPIs

The following KPIs and corresponding acceptable and target levels are proposed. Antartica Bars and HCL agree to a 6 months calibration period for arriving at acceptable and target service level. These recalibrated levels are to be jointly agreed at the product area level and discussions supported by VE lead & procurement.

Once agreed, this section would be updated accordingly.

#### Volumetric Baseline

#### In case of Transition:

- \* The additional and removed scope tagged in this Exhibit 1: Baseline shall be added to the Transition Project scope.
- \* The required solutions for this new and removed scope along with the commercial impact will be handled through the Change Control Procedure and agreed by the Parties post the Effective Date.
- \* The handling of any further additions or removals to Exhibit 1: Baseline shall be agreed as part of the Transition Project.

| The handling of any further additions of removals to Exhibit 1. baseline shall be agreed as part of the mansition roject. |                      |                   |                             |                |  |

#### 1. ASSESSMENT OF SERVICE OBJECT OPERATIONS CHARGES AND SERVICE LEVELS

- 1.1 For the scope of Applications within a Service Object specification, a assessment of the Operations Charges, using the data included in Exhibit 1 (Baseline) for each respective Service Object, will be executed as set out below in this Section 1.3.
- 1.2 For Services, where the Operations Charges are based on price per user and/or price per Utilized Unit, no baselining shall be accepted.
- 1.3 For Operations support ticket volumes (Incidents, Problems and Service Requests), the assessment process will be as follows:
  - 1.3.1 During the Transition and ninety (90) Days from the Commencement Date ("Assessment Period") of each Service Object, the Supplier will with respect to the volumes in Exhibit 1 (Baseline), conduct an assessment to verify whether such volumes are accurate.

- 1.4 For Services that were delivered by the Supplier prior the Transition, no assessment shall be undertaken. The impact of all Change Notes that have been agreed between Parties from the date of the Baseline data as stated in Exhibit 1 until the Commencement Date for each Service Object shall be incorporated into this Agreement.
  - 1.4.1 For Services that were not delivered by the Supplier prior to the Transition, the baseline data and the result of the assessment shall be calculated as the average volumes using the data as set out in Exhibit 1 (Baseline) for that Service Object, compared with the monthly volumes measured during the Assessment Period. The Supplier will share the outcome with the Purchaser on an ongoing basis and the final result within twenty (20) Business Days from end of Assessment Period.
  - 1.4.2 Should the ticket volume increase/decrease be greater than a deadband of ten (10) percent for a specific Service Object, the Supplier shall analyse why the volumes are materially higher than those stated in Exhibit 1 of the Service Object. The Supplier shall prepare a report for the Purchaser detailing the potential causes for such materially higher volumes. The Parties shall then review and agree a remediation plan, which can include adjustment to Service Levels and/or Service Charges.
  - 1.4.3 Should the Parties not agree on the remediation plan, the Purchaser is obliged to accept 1.4.4, 1.4.5 and 1.4.6 below.
  - 1.4.4 A nominal ticket price shall be calculated by dividing the monthly Operations Charges for the relevant Service Object with the average monthly volumes, using the data as set out in Exhibit 1 (Baseline), for the same Service Object.
  - 1.4.5 After the establishment of the actual volumes during the Assessment Period, the Operations Charges for such Service Object shall, to the extent the difference with the baseline volume is greater than the deadband of ten (10) percent, be increased or decreased by an amount equal to the actual volume beyond the deadband of ten (10) percent as established during the Joint Verification Period multiplied with the agreed nominal volume price.
  - 1.4.6 Any change to the Operations Charges per Service Object shall be implemented and a new version of Exhibit 2 (Pricing) for that Service Object shall be created by the Supplier to consider the impact of the Joint Verification. For any change to Operations Charges resulting from joint verification of a Service Object, at least the same year on year productivity/ price reduction percentage of the overall Operations Charges for that Service Object as set out in Exhibit 2 shall be applied.

Exhibit 2 - Pricing

## 1. Introduction

This Exhibit is part of the Master Services Agreement between the Purchaser and the Supplier and stipulates the pricing and any special terms applicable to the Services be performed in accordance to the Service Specification for Service Object Intelligent Automation.

## 2. Applicability

This Exhibit 2 applies only to the Service Specification as per the term of services mentioned below.

| Service   | Commencement Date | Term of Service | End Date of the term |
|---|-------------------|-----------------|----------------------|
| Transition Services as per<br>Exhibit 5 – Transition Plan | 2022-07-11        | 11 weeks        | 2022-09-30           |
| Services as per the Service<br>Specification              | 2022-10-01        | 39 months       | 2025-12-31           |

## 3. Transition Services cost

Transition costs for Transition Services as per Exhibit 5 are expected to be \$54 344 for a KT timeline of 11 weeks. In the spirit of partnership, HCL will invest in the transition period, hence there will be no charge to ANTARTICA during the transition period. In accordance with the MSA, ANTARTICA shall reimburse HCL any investment costs by the effective date of the termination for convenience. In such a case, exit fee schedule mentioned below will be applicable.

|                 | Year-1    | Year-2    | Year-3    | Year-4   |  |
|-----------------|-----------|-----------|-----------|----------|--|
| Termination Fee | \$ 54 344 | \$ 40 000 | \$ 25 000 | \$ 8 000 |  |

## 4. Operations cost

4.1 The agreed monthly costs for the Services are set out in the table below. All costs are in USD.

|       | Montly Cost (USD) |

4.2 The estimated Monthly Costs for the Managed Capacity are set out in the table below. The estimated Monthly Cost are calculated based on the roles and volumes defined in Exhibit 1 (Baseline) to this Service Object and the hourly rates defined in Exhibit A to Appendix L (Rate card). If any conflict between the table bellow and the Exhibit 1 and the Exhibit A to Appendix L, then the Exhibit 1 and the Exhibit A to Appendix L will prevail.

### 5. Total Bonus Value

The Service Bonus Model and the calculation of the Bonus Value is defined in Appendix F, Section 5. The Total Bonus Value for this Service is defined as:

- As 4% of the Monthly Cost, defined in Section 4.1 above. (i.e. the Total Bonus Value is the span between 96% - 100% of the Monthly Cost)

## 6. Invoicing Terms

The invoicing and payment terms monthly retroactive, as set out in Appendix L to the Agreement, will apply.

## 7. Special terms

- The above pricing is based on the application count and incident baseline volume as described in Exhibit 1 - Baseline\_2022\_Intelligent Automation
- 2. Service Bonus is applicable for fixed spend deliveries
- 3. Calibration period: Antartica Bars and HCL agree to a 6 months calibration period for arriving at acceptable and target service level for all KPIs including Resources fulfillment & attrition KPIs. These recalibrated levels are to be jointly agreed at the product area level and discussions supported by VE lead & procurement
- 4. For Attrition KPI measurement it will be only applicable for designated & dedicated resources working for fixed delivery
- 5. The monthly DEV capacity considered for above calculation is 3 developers offshore in Bangalore. Any future increase in DEV capacity & roles will be calculated as per rate card and the commercials revised accordingly through change note process

| Antartica Bars Corp      | oration                      |     | 2               | a. Based on mutual   |  |

for the current product backlog / incident baseline. This is expected to result in a cost savings of  $50\,000$  / year and  $150\,000$  over 3 years in the Intelligent Automation SO

- b. Based on mutual agreement with ANTARTICA PO/PM in Intelligent Automation and Corporate Worklife SOs, 1 (one) offshore FTE optimization in the DWP PowerApps Team can be explored for the current product backlog / incident baseline. This is expected to result in a cost savings of \$50 000 / year and \$150 000 over 3 years
- 7. All HCL consultants will be based out of ANTARTICA's office premies in India, China, Sweden and other global locations as required by ANTARTICA. Laptops and all network requirements shall be fulfilled by ANTARTICA

8. The following roles and rates have been mapped to the DEV capacity. For each DEV, role the mapping and appropriate rate would be mutually discussed and agreed before onboarding

## 8. Contact persons

Psurchaser's key commercial contact for the Service(s) will be: <a href="mailto:sachidanand.menon@hcl.com">sachidanand.menon@hcl.com</a>

Supplier's key commercial contact for the Service(s)will be: <a href="mailto:lisa.jonsson@Antarticabars.com">lisa.jonsson@Antarticabars.com</a>

#### **EXHIBIT 3 – DATA PROCESSING**

#### DESCRIPTION OF PROCESSING ACTIVITIES

NAME OF PROCESSING ACTIVITY(IES): IT SERVICES (UNDER MASTER SERVICE AGREEMENT)

## 1. SCOPE, TYPE AND PURPOSE OF THE INTENDED COLLECTION, PROCESSING OR UTILIZATION OF PERSONAL DATA, KIND OF PERSONAL DATA, CATEGORIES OF DATA SUBJECTS AND ROLES OF THE PARTIES:

#### **Scope & Purpose**

Supplier will process personal data as necessary to perform IT Services pursuant to the Agreement and its appendices, and as further instructed by Antartica Bars in its use of the Services including but not limited to application maintenance, application development and Infrastructure Services.

IT Services consist of among other things the following activities in relation to personal data: [use of personal data to set up, operate, monitor and provide the Services (including support), provision of consulting services; upload any fixes or upgrades, back up of personal data; computer processing of personal data, including data transmission, data retrieval, data access; execution of instructions of Antartica Bars in accordance with the Agreement.

#### **Roles**

Antartica Bars is Controller and the Supplier is Processor

#### Type of personal data and categories of data subjects

The supplier (Processor) will for the applicable Service process personal data described in column "Data Element" in Attachment A to this document.

Data Subjects for the applicable Service are described in column "Data Subject" in Attachment A to this document.

#### 2. DURATION OF THE PROCESSING OF PERSONAL DATA:

The processing activity will continue for as long as the Agreement is valid and for a period of three (3) months thereafter to allow the Processor to erase or retransfer the personal data.

#### 3. ADDITIONAL INSTRUCTIONS:

N/A

21 February 2022

#### 4. PLACE OF PROCESSING:

Personal data will for the applicable Service be processed at the locations described in column "Hosting location" and "Additional country" in Attachment A to this document.

#### 5. TECHNICAL AND ORGANIZATIONAL SECURITY MEASURES:

Refers to Appendix H and Appendix O (Antartica Bars Minimum Cybersecurity Requirement), which covers this area

#### 6. **SUB-PROCESSORS:**

Personal data will for the applicable Service be processed by sub-processors as described in column "3-rd party details" in Attachment A to this document

#### 7. ATTACHMENTS:

Attachment A: DPA data form

#### 1. Introduction

This Exhibit 5 covers the transition plan for the Service Object Intelligent Automation. HCL understands how critical it is for Antartica Bars to make transition project a success. In order to ensure this and meet Antartica Bars objective of partnering with a supplier, HCL has defined an effective and risk free transition approach to move the services to Target Operating Model.

## 2. Transition Scope

As part of the transition, key focus will be on the following tracks which have been described:

- 1. Monitoring & Maintenance
- 2. Quality Assurance
- 3. Platform & Innovation

#### 3. Timelines

The following transition timeline and activities have been agreed between Antartica Bars, HCL and the incumbent.

Expected Start Date: July 11, 2022

Expected End Date: September 30, 2022

The transition timeline will be spread across 2 Phases, each with its key focus areas. The following table captures the key tasks, activities and respective owners

#### Phase 1 – July to August

| Timeline            | M&M Track  | QA Track   | Platform / Innovation Track  |
|---------------------|--|--|--|
| July 11 – July 15   | Cap Gemini + HCL Azure VM migration  | KT with Feride, Sourabh<br>& Sarath  | KT with Rajesh, focus on BP<br>Databases & Maintenance and   |
| July 18 – August 12 | L1 KT with Cap Gemini L2 starts KT with Factory Developers   | Oversight of KT to M&M<br>L2   | implementing feedback from<br>tech review. Read &<br>understand Azure<br>Documentation in preparation<br>for Pekkas return |

## 1. Automation Lead – Intelligent Automation

This Statement of Work Specification is the development specification that describes the Services to be provided, including to define the role of the Intelligent Automation Lead, also known as Automation Shepherd.

| General                               |  |  |  |
|---------------------------------------|--|--|--|
| Agile team:                           | Intelligent Automation Strategy & Business Office (ASBO)   |  |  |
| Vision and mission for the agile team | Leading a product area fully dedicated to driving more automation into our business processes, simplifying the work-life for thousands of our colleagues and partners. |  |  |

#### Scope of work

As Automation (sourcing) Lead for Intelligent Automation you will be overall responsible for the whole engagement of HCL towards Antartica Bars.

You are the key player connecting all the components together between Antartica Bars and HCL, including our connection to HCL IA COE.

This role will be part of the HCL Technology IA CoE Leadership Team with end-to-end accountability for defining, delivering, managing, and growing RPA practice.

#### Responsibilities including but not limited to:

- Leading the HCL Initiative towards Intelligent Automation, incl operationally leading the different HCL teams when needed.
- Responsible for monitoring and reporting on HCL Team KPIs, progress, and priorities.
- Responsible for creating, monitoring, and following up on individual goals and KPIs set for HCL teams.
- Responsible for driving and monitoring continuous improvements, efficiencies, synergies, and harmonization into HCL Blue Prism M&M, QA & Platform teams.
- Representing HCL M&M in Automation Strategy & Business Office(ASBO), presenting relevant data of the current status and actions taken (proactive & reactive).
- Representing Platform in ASBO to align and drive the Platform roadmap, securing the right alignment.
- Responsible for over-sight of Intelligent Automation
   Platform to ensure safe, robust, and scalable automation for Antartica Bars.
- Identify gaps, efficiency, and performance improvement opportunities through business process assessments, and workshops, and recommend technology solutions to scale up the IA platform.

#### Makhsos

- Create Schedules in Blue Prism according to customer needs.
- Optimize VM and license utilization through smart scheduling.
- Support in UAT, Go Live & Hyper care with IA developers & community.
- Responsible for extra attention to processes in Hyper care.
- Ensure smooth hand-over and responsibility of BOTs from developers, post hyper care, and communicating to all stakeholders.
- Ensure that all VMs are connected & available in Blue Prism ANTARTICA Test and ANTARTICA Production.
- Ensure all VMs are ready to run their processes in Production, with all pre-requisites available and enabled.
- Ensuring that all robots work within their SLAs.
- Timely communication to Hub POs, stakeholders, and customers in case of problems before the Response SLA is breached, explaining in an understandable way to the customer what's wrong, who's working on fixing it and estimated time to resolution.
- Timely follow up communication to Hub POs, stakeholders, and customers if a Resolution SLA is has 1 hour left to breach. This should include a status update and update on estimated time to resolution, at this point we also know if we will breach SLA or not most likely.
- Timely follow up communication to Hub POs, stakeholders, and customers when a Resolution SLA is breached. This should include a status update and update on estimated time to resolution. If the SLA breach is classified as preventable, a lesson learned session must be booked.
- Maintaining and updating runbook (Operational Handbook) with known issues and lessons learned from previous incidents/bugs.

Name of document Page

- Extensive troubleshooting and de-bugging of BP process and logs to identify the potential root cause of the issue and take responsibility for driving the right solutions to production to prevent the same issue from happening again.
- Support and closely work with the IA Platform, IA QA and IA Product Teams during special events such as: migration, upgrades, DR etc.
- Well-versed with Agile delivery lifecycle and methodology (DevOps)

#### **BP Support Lead:**

- Responsible for operational efficiency in the M&M team, ensuring there are no SLA breaches and driving the IA support team towards "Operational Excellence".
- Acting on SLA breaches to minimalize breach-time as well as leading the lessons learned with all relevant parties to prevent the breach from happening again.
- Ensure that communication to stakeholders and customers happens within the Response SLA, with the right level of details and information for the customer to understand next appropriate action.
- Ensure a smooth collaboration across all IA Teams and secure that M&M has everything they need to deliver their services at the right times in order to not breach SLAs.
- Ensure timely connect with SMEs/Business Units EndUsers to take timely feedback on the performance of the critical and high revenue-saving BOTs. Including if any changes are required to the existing process flow.
- Responsible to ensure that customers can trust the IA Team and their deployed BOTs in Production. Consistent level of service is critical.
- Analyse and perform Workload management w.r.t. schedulers and runtime resources, and create resource pools, to mitigate any potential risk of the scheduled process failing.
- Facilitate & align across Antartica Bars teams, with an agile and incremental delivery of targeted business outcomes in DevOps.
- Timely communication to platform and infrastructure team for any bottlenecks identified in the production environment. Follow up with platform team and ensure problems are resolved.
- Ensure support teams are available (L1 available 24x5 and L2 available 16x5 + on call) and adhere to their working shifts to avoid any SLA breaches.
   Have a strong "automation first" mindset with extensive technical knowledge on Blue Prism.

## 1. Quality Assurance Champion Intelligent Automation

This Statement of Work Specification is the development specification that describes the Services to be provided, including to define the role of the Intelligent Automation Operations Team.

| General                               |  |
|---------------------------------------|--|
| Agile team:                           | Intelligent Automation Product Area  |
| Vision and mission for the agile team |  |
|                                       | As a Quality Assurance (QA) Champion – in the Intelligent Automation team your job is to ensure we have the right governance and over-sight on Automation quality standards and best practices.  |
|                                       | The mission is to enable Intelligent Automation factory to ship scalable, robust, and high-efficiency designed BOTs with confidence, hence providing the best end-to-end user experience across all businesses.  |
|                                       | With technology agnostic and platform-independent RPA, QA needs to play a vital role throughout the development life cycle. A proper automation QA testing strategy will improve the quality of our BOTs which will heavily reduce the workload of the M&M team. |

Responsible for maintaining and the quality of all Blue Prism

automation in Production. If something isn't up to

Issuer

#### Erfan Makhsos

Scope of work The quality champion is responsible for the proactive and reactive processes and governance for Quality Assurance. The QA champion acts as an enabler, provides over-sight and enforcement when needed. Operationally this includes proactive solution design consultation before development starts, code quality review and approval before go-live and monitoring the BOTs for deviations through their lifecycles. But main focus should be on creating structures that enables everyone in the team to become a quality enabler in their day to day work. Quality Assurance Champion Responsibility of Work including, but not limited to: Responsible for the end-2-end Automated QA & Migration to Test&Prod supporting IA Developers and Controllers Responsible reviewing and approving automation process solutions in accordance with standard automation design principles, conventions, and Antartica Bars best practices, prior to moving to production, hence acting as a shield between ANTARTICA/test and production environment.

standard, the QA champion must prevent that code from hitting the production until it's fixed.

- Identify quality bottlenecks in existing legacy RPA processes and enforce their correction.
- Collaborating within the IA team to drive actions from feedback related to the QA process change and improvement.
- Meticulously analyze and review the quality of RPA deliverables like PDD, SDD, and ORB making sure it has captured all the business process steps in solution designs and consider accompanying factors such as recoverability, scalability, resilience, scheduling, and case management to ensure solution designs meet all requirements.
- Periodically review, maintain, improve, and update BP Automated code review process/BOT together with M&M Team.
- Raise appropriate flags at relevant intervals in case of any impediments/hurdles.
- Taking end-to-end ownership and accountability of the entire QA process.
- Work closely with IA factory POs to take responsibility for maintaining the development integrity of the solution and constituent processes and objects.
- Responsible for IA factory's Quality Assurance, routine the ROM, ensuring worldclass quality and robustness in our environments and solutions.
- Actively participate, and drive continuous improvement initiatives in Antartica Bars Blue Prism Robotic Operating Model (ROM) and the ways of working to drive a quality mindset, infusing it with current best practices.

#### Skill Set - Specific to the role

- Blue Prism Certified Solution Designer Developer (ASD01)/ROM Architect (ARA02)
- Experience in performing code-review as per industry best practices.
- Driven by innovation and finding new smarter ways to get work done.
- Good understanding of High-Level RPA Solution
   Designing.
  - Well-versed with Agile delivery lifecycle and methodology (Devops)

## 1. Platform & Innovation Team – Intelligent Automation

This Statement of Work Specification is the development specification that describes the Services to be provided, including to define the role of the Intelligent Automation Platform & Innovation Team.

| General                               |  |
|---------------------------------------|--|
| Agile team:                           | Intelligent Automation Platform Team   |
| Vision and mission for the agile team | The IA Platform & Innovation is a critical role for 2 key reasons:  1) Making sure we have the best automation platform and infrastructure possible and  2) keep us in the technical forefront, identifying, driving, and implementing new AI and automation technologies together with the global IA community. |

#### Scope of work

As Platform & Innovation – Intelligent Automation (RPA/AI) you will be responsible for the overall technology stack hosted by the Intelligent Automation Product Area. You'll enable digital transformation by ensuring our Blue Prism platform is robust and scalable, including its' Microsoft Azure components, databases, servers, and Virtual Machines.

#### Operational Responsibility of Work including, but not limited to:

- Responsible for monitoring & managing all Intelligent Automation infrastructure components in our subscriptions and resource groups, such as databases, servers, VMs, Al components, etc.
- Responsible for monitoring, maintenance, housekeeping, and archiving activities on SQL databases to optimize for maximum performance with a maintained audit trail.
- Responsible for Disaster Recovery for the whole IA tech stack, ensuring limited downtime and fast recovery.
- Responsible for a controlled process for installing, testing, and upgrading business applications used by our automations on Virtual Machines together with M&M Team.
- Responsible for setting and monitoring security routines on Intelligent Automation platform and applications.
- Responsible to ensure Training databases and Windows Virtual Desktops (WVD) exist and function for Citizen Developers in collaboration with Managed Workstation Team that hosts our training VMs.
- Responsible for supporting the M&M team to execute fast Platform RCA to ensure Robot SLAs aren't breached due to platform issues.

Erfan Makhsos

- Helping Intelligent Automation Community with advanced support, knowledge transfers, and training to empower more people to do more by themselves.
- Responsible to ensure the Intelligent Automation platform, infrastructure and applications follow and adhere to the Antartica Bars security (including cybersecurity) regulations and directives.
- Responsible to monitor Blue Prism license usage to ensure enough capacity is available to continue scaling the operations.
- Responsible to monitor Azure cloud cost usage, optimizing our cloud spend, while providing world-class Intelligent Automation infrastructure in Azure.

#### <u>Development Responsibility of Work including, but not limited to:</u>

- Responsible to lead all tech development initiatives and improvement projects that's been assigned and approved by Automation Strategy & Business Office (ASBO).
- Owner of the technology roadmap of IA, responsible for driving innovation, and enabling new technical infrastructure for the development teams.
- Leading tech development initiatives end-2-end, from gathering requirements to implementation and operations of new automation solutions.
- Responsible for presenting progress, seeking guidance, and required approval/gates on tech initiatives with Automation Strategy & Business Office (ASBO) and other relevant teams in Antartica Bars.
- Provide different technology options in our roadmap and their cost/benefit analysis when multiple options are available to ASBO for decision.
- Responsible to secure the alignment and support from other Digital Product Teams' backlogs, to be able to deliver on the technology roadmap.
- Responsible to drive improvements in the Blue Prism platform and automation infrastructure to meet the current and future demand.
- Tracking of trends, latest news, and external benchmarks to ensure best in class

#### Platform Lead Responsibility of Work including, but not limited to:

- Delegated authority from Director of Intelligent Automation to be responsible for the whole Intelligent Automation technology stack.
- Responsible for leading the Intelligent Automation Platform team in the day-to-day operations with support
- Representing Platform in ASBO to align and drive the Platform roadmap

|   | <ul> <li>Responsible for governance of Intelligent Automation Platform to ensure safe, robust, and scalable automation for Antartica Bars.</li> <li>Responsible towards the Director of Intelligent Automation to ensure we operate our technology stack in alignment with the Antartica Bars Cybersecurity Directives.</li> <li>Responsible to lead all Intelligent Automation infrastructure initiatives end-2-end, from gathering requirements to implementation and operations of new automation infrastructure.</li> </ul> |  |  |

## 1. RPA Developers Intelligent Automation

This Statement of Work Specification is the development specification that describes the Services to be provided, for the developer role in the Intelligent Automation Team.

| rovided, for the developer role in the intelligence talendard. |  |  |  |
|--|--|--|--|
| General  |  |  |  |
| Agile team:  | Intelligent Automation Product Area  |  |  |
| Vision and mission for the agile team                          | As an Automation Developer – in the Intelligent Automation team you will be working with new technology focused on automating and simplifying work-life for thousands of colleagues. We are automating both front and back-end processes that impact all departments and markets in our company, and as an Automation Developer, you'll be playing a key role in making it happen. |  |  |

#### Scope of work

The work includes the whole automation lifecycle, covering across our global operations. Training is also a significant part of the position since our automation developers need to be at the forefront of new technologies and solutions coming.

#### Main responsibilities

- Identifying new process opportunities and accurately analyzing and estimating new processes, quickly assessing feasibility and effort
- Designing automation process solutions in accordance with standard automation design principles, conventions, and Antartica Bars best practices.
- Driving the automation from idea to production in collaboration with others.
- Continues communication to our stakeholders on progress and benefits realization after delivered automation.
- Problem-solving issues that arise in day to day running of automation workflows and providing timely responses and solutions as required.
- Collaborating within and outside the team to drive innovation.
- Raise appropriate flags at relevant intervals in case of any impediments/hurdles.
- Taking end-to-end ownership and accountability of the assigned projects.
- Actively participate, identify and work on ideas during the innovation sprint in every PI.
